

## DAFO FORREX FIRE SUPPRESSION SERVICE & TRAINING COURSES

**The Dafo training courses will give You knowledge regarding your fire protection systems abilities and help You to keep it operating safely for many years to come.**

To maintain a skilled and knowledgeable workforce, it is imperative for service personnel and their supervisors to receive the best training possible.

By combining theory and hands-on application you will gain deeper knowledge in all aspects of the Dafo Fire Suppression System including elements like basic design, troubleshooting, maintenance and service.

Certificates are valid for 5 years. After 5 years we offer a shorter follow-up training that renews your certificate.

Warranties only apply when the Fire Suppression System (FSS) is maintained by certified personnel.

### **Advantages**

- Ensures sustainable functionality of your FSS.
- Ensures that you stay up to date on the latest Dafo products and regulations in the market-place.
- Ensures that you gain technical knowledge needed to reduce the time and cost associated with maintenance and service of your FSS.
- Adds value in your offer to your customers.
- Improves your troubleshooting skills through training by experienced Dafo field service technicians.
- Brings knowledge and expertise to your business through an improved understanding of your Fire Suppression System.

# DAFO SERVICE & TRAINING COURSES

## Training for Certificate 1

– Authorized Service provider  
HV & BUS

### Target persons

Service and Maintenance Technicians

### Training description

Service and maintenance training consisting of classroom and hands-on exercises on-site. The course is aimed at providing basic knowledge of Dafo FSS including service performance and troubleshooting. The participants will also be certified to install pre-fabricated Dafo FSS.

During the classroom sessions, our experienced instructors will share their knowledge and expertise through interactive activities followed by hands-on activities where students can perform the annual maintenance of a Dafo Fire Suppression System.

### Previous knowledge

Basic knowledge of diesel engines or hydraulic systems and knowledge of DC current is also needed.

### Duration of training

1 Day

### Number of participants

Maximum 10 participants.

## Training for Certificate 2

– Authorized Service provider BUS

### Target persons

Service and Maintenance Technicians

### Training description

Service training consisting of classroom and hands-on exercises on-site. The course is aimed at providing basic knowledge of Dafo FSS including service performance and troubleshooting.

During the classroom sessions, our experienced instructors will share their knowledge and expertise through interactive activities followed by hands-on activities where students can perform the service of a Dafo Fire Suppression System.

### Previous knowledge

Basic knowledge of diesel engines and DC current is needed.

### Duration of training

1 Day

### Number of participants

Maximum 10 participants.

## Training for Certificate 3

– Factory Installer HV & BUS

### Target persons

Production Line Installers

### Training Description

Installation training consisting of classroom and hands-on exercises on-site. The course is aimed at providing basic knowledge of how to install a pre-fabricated Dafo FSS in a production line as well as obtaining basic skills for conducting fire risk assessments including identification of potential fire hazards and subsequent evaluation of severity, probability and mitigation procedures.

During the classroom sessions, our experienced instructors will share their knowledge and expertise through interactive activities followed by hands-on activities where the participants will perform installations of Dafo Fire Suppression System.

### Previous knowledge

Basic knowledge of diesel engines, knowledge of DC current and basic knowledge of how to install mechanical and electrical components in machines/buses.

### Duration of training

Depending on experience

### Number of participants

Maximum 4 participants.

## Training for Certificate 4

– Trainer HV & BUS

### Target Persons

Training Managers

### Training Description

The Level 4 training is adapted for larger OEM and operators which have their own service and training organizations. This training session aims at providing in-depth technical knowledge of Dafo FSS. Participants will obtain knowledge in order to be able to train other individuals within their own organization as well as obtaining basic skills for conducting fire risk assessments including identification of potential fire hazards and subsequent evaluation of severity, probability and mitigation procedures.

The training consists of classroom and hands-on exercises on-site.

During this training our experienced instructors will share their knowledge and expertise through interactive activities followed by hands-on activities where participants will be examined in various trouble shooting scenarios of Dafo FSS.

### Previous knowledge

It is recommended that the participants have a Level 1 or 2 certificate and basic knowledge of Dafo FSS.

### Duration of training

2 Days

### Number of participants

Maximum 2 participants.

## Training for Certificate 5

– Authorized designer HV & BUS

### Target persons

Dafo Authorized Distributors

### Training Description

This training session encompasses all elements included in the other levels of certifications. In addition, we are also adding in-depth knowledge of how fires occur and how to design the Dafo Fire Suppression System in the most optimized and effective way.

During the classroom sessions our experienced instructors will share their knowledge and expertise through interactive activities followed by hands-on activities where attendees will design and perform several installations of Dafo Fire Suppression Systems.

### Previous knowledge

This training course is dedicated for Dafo appointed distributors only that have a signed and valid distributor agreement with Dafo VFP.

### Duration of training

Depending on experience

### Number of participants

Maximum 4 participants.

### On-site training

All training is done on-site where the attendees will be working on real machines.

### Who would benefit?

- Direct maintenance and service personnel
- Asset managers
- Training Coordinators or Training Manager

### Certification

All participants that attend and who passes the final examination will receive a certificate according to the level performed.

## ATTENTION

In all practical training sessions, there must be a vehicle equipped with a Dafo Fire System Suppression available on-site

For Level 5, 5 machines must be available to be installed by the attendees.
